Three wiring options

Standard wiring

With bipolar cable through the centre hole, on the bottom of the housing. It is also possible to use a tripolar cable, with the ground wire exiting via a lateral hole to earth other metallic parts.

Fast bottom wiring

With two monopolar cables fed through two holes provided on the bottom of the housing. There is no need to open the contact cover during this procedure.

Fast lateral wiring

With two monopolar cables fed through two holes provided on the side of the housing. There is no need to open the contact cover during this procedure.

Transparent head and slotted holes

Head transparent on all sides, to allow adjustment and centering of the actuator in relation to contacts.

The slotted holes on the actuator and in the contact housing allow for correct alignment of both devices.

Rotating head

Turning the head and contact springs by 180°, a door contact with rear actuation can be converted to front actuation. Simply by loosening three screws.

Rear fixing of the housing

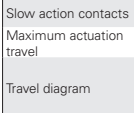

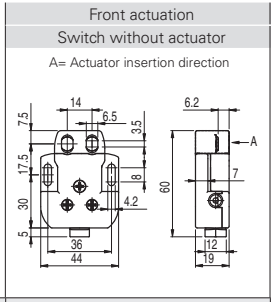

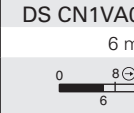

The special housing shape allows rear fixing.

You also have the option of inserting a tubular wrench close to the mounting holes, to hold the nut in place during fixing.
